OMNI Solutions Enters into Install Agreement with TwinMed

Patent-pending system supercharges washing process, according to company

MADISON, Wis. — OMNI Solutions has been awarded an 8,000 Lux Hydroxyl Laundry System installation agreement with TwinMed LLC, a full-line medical supplies distributor, the company reports.

OMNI Solutions says it provides innovative, earth-friendly on-premises laundry and housekeeping cleaning solutions, primarily to customers in the healthcare and hospitality marketplace.

OMNI Solutions' line of laundry detergents, softeners and stain removers are injected into standard commercial washing units through its patent-pending LUX Hydroxyl System to supercharge the washing process, according to the company.

The supplier agreement with TwinMed spans five years, with the goal of installing 8,000 LUX Hydroxyl Systems. TwinMed will also carry OMNI Solutions' housekeeping product lines.

"OMNI Solutions' innovative design reduces energy and water consumption, empowering healthcare operators to further their green initiatives," says Andrew Rupnow, founder of OMNI Solutions. "TwinMed is an outstanding resource for healthcare facility operators, and we are very pleased to be included in their product offerings."

"More businesses are focusing on integrating environmental sustainability practices into their operations," says Meyer Greenbaum, executive vice president of business development for TwinMed. "We are really excited to be able to offer our customers the LUX Hydroxyl Laundry System to help further corporate responsibility and green initiatives."
